Master Minimum Equipment List

Print Date: 2019-12-04

The table that follows gives a list of the technical and editorial changes from the previous issue of this document.

This is a complete revision of the MMEL to reflect the rebranding of the Bombardier CSERIES to Airbus A220. All reliefs are now identified with a unique ATA number.

ITEM NUMBER	TYPE OF CHANGE	SUMMARY OF CHANGE

Master Minimum Equipment List

Aircraft A220–100 / A220–300

Subject	Chapter/Section	Pag
DEFINITIONS		
ACRONYMS		
PREAMBLE		
SECTION 1 – LRU / COMPONENT ORIENTED MMEL RELIEF		
21 – AIR CONDITIONING		
Overhead Control Panel Pushbutton Annunciator (PBA) Switch Li		
(light function only)	21–00–01	
Low Pressure Ground Connection (LPGC)	21–20–01	
Recirculation Fan (RFAN)	21–21–19	
Floor Heaters, Flight Crew (FTWRM) ***	21–23–62	
Galley Fan (GFAN)	21–23–64	21–
Galley Heater (GHTR)	21–23–65	
Temperature Sensor, Galley Heater (GHTS) — Elements	21–23–66	
Extraction Fans (EFAN)	21–24–16	
Avionics Bay Exhaust Valves (AEV)	21–24–18	21-
Ground Valve, MID Avionics Bay	21–24–24	21-
Forward/Middle Bay Inlet Fan	21–26–15	21-
Cabin Altitude Limitation Feature	21–30–04	
Cabin Pressure Control System (CPCS)	21–31–01	21-
Outflow Valve Travel Limiter	21–31–28	21-
Cabin Altitude Indication	21–33–00	21-
Cabin Differential Pressure Indication	21–33–01	21-
Cabin Rate of Change (ROC) Indication	21–33–02	21-
Landing Field Elevation (LFE) Indication	21–33–03	21-
Landing Field Elevation (LFE) Automatic Selection	21–33–04	21-
Emergency Depressurization PBA Switch Guard	21–33–05	21-
Pressure Equalization Valves (PEV)	21–34–01	21-
Air Conditioning Packs	21–51–01	21-
Packs High Flow Mode	21–51–02	21 –1
Emergency Ram Air Valve (ERAV)	21–52–04	21 –1
Flow Control Valve (FCV)	21–53–14	21 –1
Ram Air Regulating Valve (RARV)	21–53–18	21 –1
Forward Cargo Shutoff Valve (FWD CSOV)	21–55–02	21–1
Aft Cargo Shutoff Valve (AFT CSOV)	21–55–03	
COCKPIT/CABIN Temperature Control Knob	21–60–27	21–2
Trim Air Pressure Regulating Valve (TAPRV)	21–63–00	
Trim Air Shut–Off Valve (TASOV)	21–63–01	
Integrated Air System Controller (IASC)	21–90–01	

Master Minimum Equipment List

ubject	Chapter/Section	Page
2 – AUTO FLIGHT		
Takeoff/Go Around (TOGA) Switches (Thrust Levers)	22–10–00	22-
Autopilot Systems	22–11–00	22-2
Flight Control Panel (FCP)	22–11–05	22–
Autothrottle Disconnect Buttons (Throttle Quadrant)	22–31–01	22–0
3 – COMMUNICATIONS		
Overhead Control Panel PBA Switch Light (light function only)	23–00–01	23–
VHF Communications Systems	23–11–00	23–
HF Communications Systems ***	23–12–01	23–
Iridium Satellite Communication System (SATCOM) ***	23–15–00	23–
Selective Calling (SELCAL) System ***	23–21–00	23–2
Datalink System***	23–22–00	23–3
Pre-recorded Announcement (Passenger Briefing System)	23–30–01	23-4
Crew Member Interphone System	23–30–04	23–
Alerting System	23–30–05	23–0
Public Address System	23–31–01	23–0
Handsets	23–31–04	23–7
Flight Deck Speakers	23–31–06	23–8
Lavatory Speaker	23–31–07	23–9
Audio Control Panel	23–50–35	23–9
Push-to-Talk (PTT) Switches	23–51–01	23–9
INT Switch	23–51–02	. 23–10
Flight Deck Hand Microphone Systems	23–51–03	. 23–10
Flight Deck Headsets Earphones/Headphones and Boom Microphones	<u> </u>	. 23–1
Cockpit Voice Recorder (CVR) System	23–70–06	. 23–1
Flight Deck Door Surveillance System ***	23–73–01	. 23–1
4 – ELECTRICAL POWER		
Overhead Control Panel PBA Switch Lights (light function only)	24–00–01	24-
Electrical/Towing Service Panel PBA Switch Lights (light function only)	24-00-02	24-
L DISC / R DISC Switch Guards	24–11–01	24-2
Variable Frequency Generator (VFG) Systems [each system includes Variable Frequency Generator (VFG), Generator Control Unit (GCU), Overvoltage Protection Unit (OPU), Generator Line Contactor (GLC),		
Line Current Transformer (LCT), Generator Control Switch (PBA)]	24–11–02	
VFG Oil System	24–12–01	
Permanent Magnet Generator (PMG)	24–20–44	24–3
Auxiliary Power Unit Generator (AGEN) System [includes APU Generator (AGEN), APU Generator Control Unit (AGCU), APU Overvoltage Protection Unit (OPU3), APU Line Contactor (ALC), Line Current Transformer (LCT3)]	24-22-01	24-
Ram Air Turbine (RAT) System – Deployed Sensor	24–23–01	
RAT GEN Switch Guard	24-23-03	

Master Minimum Equipment List

Subject	Chapter/Section Pag
Transformer Rectifier Unit (TRU) 1 or 2	24–31–01 24-
AC Bus Tie Contactor (BTC)	24-33-03 24-
External AC Power System (includes EPCTA and ELC)	24–40–00 24-
Cockpit Thermal Circuit Breaker (TCB) Status Indication	24-40-02 24-
CABIN PWR Switch Guard	24–54–02 24-
Maintenance Power Mode	24–55–01 24-
5 – EQUIPMENT/FURNISHINGS	
Overhead Control Panel	25-00-01 25-
Observer Seat (Including Associated Equipment)	25-02-02 25-
Pilot Seats	25–11–01
Overhead Storage Bin(s)/Cabin and Galley Storage	
Compartments/Closets	25–12–01 25-
Footrests	25–16–03 25-
Eye Level Locator	25–16–17 25-
Cockpit Sun Visors/Sunshades	25–18–05 25-
Passenger Seats	25–21–01 25-
"Fasten Seat Belt While Seated" Signs or Placards	25–21–02 25-
Flight Attendant Seat Assembly (single or dual position)	25–23–05 25-
Passenger Convenience Items/Non Essential Equipment & Furnishin (NEF) ***	ngs 25–29–08 25-
Galley Restraint Latches	25–31–01 25-
Galley/Cabin Waste Receptacles Access Doors/Covers	25-31-02 25-
Lavatory Waste Container Flapper/Access Doors	25–41–05 25-
Exterior Lavatory Door Ashtrays	25–41–06 25–
Lavatory NO SMOKING Placards	25–41–08 25–
Printed Supplemental Safety Information	25–60–01 25–
Emergency Evacuation Command System	25–60–02 25–
Emergency Medical Kit	25–60–03 25–
Automatic External Defibrillator (AED) and/or Associated Equipment*	*** 25–60–04 25– ⁻
First Aid Kit (FAK)	25–61–01 25– ⁻
Life Vests	25–61–03 25– ⁻
Megaphones	25–61–06 25– ⁻
Flight Attendant Flashlights/Flashlight Holders	25–61–07 25– ⁻
Emergency Locator Transmitter (ELT)	25–62–01 25–
Overwing Emergency Exit Slides Condition Indications	25-63-02 25-
26 – FIRE PROTECTION	
Overhead Control Panel PBA Switch Lights (Light Function Only)	26-00-01
FIDEX Control Unit	26–10–01
Auxiliary Power Unit (APU) Fire Detection Loops	26–12–00
Main Landing Gear Bay Overheat Detection Loops	26–14–00
Overhead CARGO BTL Panel	26–15–05

Issue 011, Oct 21/2019

Subject	Chapter/Section	Page
Lavatory Smoke Detection Systems	26–16–01	26–4
Portable Fire Extinguisher	26–20–01	26–5
Overhead ENGINE & APU FIRE Panel	26–22–10	26–6
Cargo Bay Fire Extinguisher, High Rate Discharge (HRD)	26–25–01	26–6
Cargo High Rate Discharge (HRD) Fire Extinguisher Cartridge Bridgewire	26–25–02	26–7
Cargo High Rate Discharge (HRD) Fire Extinguisher Cartridge Bridgewire	26–25–03	26–7
Cargo Bay Fire Extinguisher, Low Rate Discharge (LRD) 1	26–25–04	26–8
Cargo Low Rate Discharge (LRD) 1 Fire Extinguisher Cartridge Bridgewire	26–25–06	26–8
Cargo Low Rate Discharge (LRD) 1 Fire Extinguisher Cartridge		
Bridgewire	26–25–08	26–9
Lavatory Fire Extinguishing Systems	26–26–00	. 26–10
7 – FLIGHT CONTROLS		
Overhead Control Panel Cut Out Switch Light (light function only) PFCC		07
1(2)(3) "OFF"	27-00-01	
PFCC 1(2)(3) Cut Out Switch Guards	27-00-02	
Primary Flight Control Computer – Cut Out Switch	27–01–05 27–21–00	
Rudder Pedals Adjustment Systems – Handles	27–21–00	
High Lift Select Lever (HLSL)	27-61-01	
Ground Spoiler (GS) System Multi-Function Spoiler (MFS) #1 System	27–62–01	
B – FUEL		
Fuel System Synoptic Page Indications	28–00–01	28–
Water Drain Valves	28–11–15	28–
Fuel Tank Pressure Relief Valves (PRVs)	28–12–05	28–
Auxiliary Power Unit (APU) Fuel Feed Shutoff Valve (SOV) Actuator	28–21–55	28–
Overhead FUEL Control Panel PBA Switch Lights (light function only)	28–22–03	28–
Center Tank Fuel Transfer Systems	28–22–04	28–
Gravity Transfer Shutoff Valve (SOV)	28–22–15	28–
L AC Boost Pump	28–23–02	28–
Defuel/Isolation Transfer Shutoff Valve (SOV)	28–23–05	28–
Refuel/Defuel Adapter Cap	28–23–20	28-
Refuel Shutoff Valve (SOV)	28–23–25	28-
Refuel / Defuel Control panel	28–23–30	28–
Flight Deck Virtual Refuel Panel ***	28–23–31	28–
EICAS Fuel Quantity Indication System	28–41–01	28–
Fuel Remote Data Concentrator (RDC)	28-41-20	28–
9 – HYDRAULIC POWER		
Power Transfer Unit (PTU) Switch	29-11-01	29_

Power Transfer Unit (PTU) Switch

Transport Canada

Master Minimum Equipment List

Print Date: 2019-12-04

- 1. Systems Definitions: Systems numbers are based on the Air Transport Association (ATA) Specification Number 100, and items are numbered sequentially.
 - A. "Item" (Column 1) means the equipment, system, component, or function listed in the "Item" column.
 - B. "Number Installed" (Column 2) is the number (quantity) of items normally installed in the aircraft. This number represents the aircraft configuration considered in developing this MMEL. Should the number be a variable (e.g. passenger cabin items) a number is not required.
 - C. "***" symbol in Column 1 indicates an item which is not required by regulation but which may have been installed on some models of aircraft covered by this MMEL. This item may be included in the operator's MEL after the approving office has determined that the item has been installed on one or more of the operator's aircraft. The symbol, however, shall not be carried forward into the operator's MEL. It should be noted that neither this policy nor the use of this symbol provide authority to install or remove an item from an aircraft. The "***" symbol may be considered equivalent to the term "if installed".
 - D. "Number Required for Dispatch" (Column 3) is the minimum number (quantity) of items required for operation provided the conditions specified in Column 4 are met.
 - <u>NOTE</u>: Where the MMEL shows a variable number required for dispatch, the MEL must reflect the actual number required for dispatch or an alternate means of configuration control approved by Transport Canada.
 - E. "Remarks or Exceptions" (Column 4) in this column includes a statement either prohibiting or permitting operation with a specific number of items inoperative, provisos (conditions and limitations) for such operation, and appropriate notes.
 - F. "Vertical Bar" (change bar) in the margin indicates a change, addition or deletion in the adjacent text for the current revision of that page only. The change bar is dropped at the next revision of that page.
 - G. "Approved" means approved by the Minister.
 - H. "Master Minimum Equipment List (MMEL)" means a document approved by the Minister that establishes the aircraft equipment allowed to be inoperative under conditions specified therein for a specific type of aircraft.
 - I. "Minimum Equipment List (MEL)" means a document approved by the Minister that authorizes an operator to dispatch an aircraft with aircraft equipment inoperative under the conditions specified therein.
 - J. "Minister" means the Minister of Transport.
- 2. "Administrative Control Items" means an item listed by the operator in the MEL for tracking and informational purposes. It may be added to an operator's MEL provided no relief is granted, or provided conditions and limitations are contained in an approved document such as the Structural Repair Manual. If relief other than that granted by an approved document is sought for an administrative control item, a request must be submitted to Transport Canada. If the request results in review and approval, the item becomes an MMEL item rather than an administrative control item.
- 3. "Affected" means the subject item of equipment (component, system or function) listed in Column 1.

- 4. "Aircraft Crew" means the operating crew members including the flight crew members, flight attendants, aircraft maintenance personnel and supervisory crew members.
- 5. "Airplane Flight Manual (AFM)" is the document required for type certification and approved by Transport Canada. The approved AFM for the specific aircraft is listed on the applicable Type Certification Data Sheet.
- 6. "Alphabetical Symbol" in Column 4 indicates a proviso (condition or limitation) that must be complied with for operation with the listed item inoperative.
- 7. "Alternate Procedures" means that the air operator (carrier) needs to develop normal, abnormal and/or emergency procedures, as applicable, for the associated item.
- 8. "Any in excess of those required by regulations" means that the equipment required by the Canadian Aviation Regulations must be operative and only excess equipment may be inoperative.
- 9. "As Required by Regulation, As Required by FAR" and other similar statements mean that the listed item is subject to certain provisions (restrictive or permissive) expressed in such regulations as the Canadian Aviation Regulations, Federal Aviation Regulations or the Airworthiness Manual, etc. Unless the MMEL provides otherwise, the items specified by these requirements must be operative.
- 10. "Associated" means a related component, system or function other than the subject one.
- 11. "Considered Inoperative" means that item must be treated for dispatch, taxi and flight purposes as though it were inoperative. The item shall not be used or operated until the deferred item is repaired. Additional actions include: documenting the item on the dispatch release (if applicable), placarding, and complying with all remarks, exceptions, and related MMEL provisions, including any (M) and (O) procedures and observing the repair category.
- 12. "Crew Member" unless otherwise specified, in addition to the CAR 101.01 (1) definition includes:
 - A. A person whose presence on board the aircraft is necessary for:
 - (1) The safety of the flight,
 - (2) The safe handling of animals,
 - (3) The safe handling of dangerous goods,
 - (4) The security of valuables or confidential cargo,
 - (5) The preservation of fragile or perishable cargo, or
 - (6) The handling of cargo.
 - B. Aircraft maintenance personnel, and
 - C. Supervisory crew members and non-operating crew members and/or flight attendants who are qualified on aircraft type.
- 13. Dash "--" symbol in Column 2 and/or Column 3 indicates a variable number (Quantity) of the item installed.

- 14. "Day of Discovery" is the calendar day an equipment/instrument malfunction was discovered. This day is excluded from the calendar days or flight days specified in the MMEL for the repair of an inoperative item of equipment, and is applicable to all MMEL items in categories A, B, C, and D.
- 15. "Deactivated" means that the specified component must be put into an acceptable condition for safe flight. An acceptable method of deactivating and securing will be established by the operator for inclusion in it's MEL.
- 16. "Deleted" in the remarks column after a sequence item indicates that the item was previously listed but is now required to be operative if installed in the aircraft.
- 17. "Engine Indicating Crew Alerting System (EICAS)" provide four classes of primary messages (WARNING, CAUTION, ADVISORY and STATUS). INFO messages are a category of non-alerting CAS messages that indicate a failure condition pertaining only to a dispatch decision. Any message that affects aircraft dispatch will be at the WARNING, CAUTION, ADVISORY or INFO level. The absence of an EICAS STATUS or higher level (WARNING, CAUTION, ADVISORY) indicates that the system/component is operating within its approved operating limits or tolerances. Maintenance level messages not associated with higher level EICAS messages and displayed on the Onboard Maintenance System (OMS) do not affect dispatch and shall be addressed in accordance with the operator's standard maintenance program.
- 18. "Extended Operations" means the operation of a turbine-engine airplane on a route containing a point that is farther from an adequate aerodrome than the distance that can be flown in 60 minutes at the one-engine-inoperative cruise speed.
- 19. "Extended Overwater Operations" means an operation over water at a horizontal distance of more than 50 nautical miles from the nearest shoreline.
- 20. "Federal Aviation Regulations (FARs)" means the applicable portions of the Federal Aviation Act and Federal Aviation Regulations.
- 21. "Flight" means a movement of the aircraft that includes one takeoff and one landing.
- 22. "Flight Attendant" (CARs) means a crew member, other than a flight crew member, who has been assigned duties to be performed in the interest of the passengers in a passenger-carrying aircraft.
- 23. "Flight Crew Member" (CARs) means a crew member assigned to act as pilot or flight engineer of an aircraft during flight time.
- 24. "Flight Day" means a 24 hour period (e.g. from midnight to midnight) either Universal Coordinated Time (UCT) or local time, based on the recorded "out time" of the first flight of each 24 hour period following the day of discovery, during which at least one flight is initiated for the affected aircraft.
- 25. "Heavy Maintenance Visit" means an airworthiness maintenance program inspection where the aircraft is scheduled to be out of service for 4 or more days.
- 26. "Icing Conditions" means an atmospheric environment that may cause ice to form on the aircraft or in the engine(s).
- 27. "Inoperative" means a system and/or component malfunction to the extent that it does not accomplish its intended purpose and/or is not consistently functioning normally within its approved operating limit(s) or tolerance(s).

- 28. "Inoperative components of an inoperative system" Inoperative items which are components of a system which is inoperative are usually considered components directly associated with and having no other function than to support that system. (Warning/Caution systems associated with the inoperative system must be operative unless relief is specifically authorized per the MMEL.)
- 29. "Is not used" in the provisos, remarks or exceptions for an MMEL item may specify that another item relieved in the MMEL "is not used." In such cases, crew members should not activate, actuate, or otherwise utilize that component or system under normal operations. It is not necessary for the operators to accomplish the (M) procedures associated with the item. However, operational requirements must be complied with, and an additional placard must be affixed, to the extent practical, adjacent to the control or indicator for the item that is not used to inform crew members that a component or system is not to be used under normal operations.
- 30. "Long Range Communications System (LRCS)" is defined in CFR 14 Section 1.1 as a system that uses satellite relay, data link, high frequency, or other approved communication system which extends beyond line-of-sight. Examples of such systems are HF-voice, HF-data link, SATCOM-voice, and SATCOM-data link.
- 31. "(M)" symbol indicates a requirement for a specific maintenance procedure which must be accomplished prior to operation with the listed item inoperative. Normally these procedures are accomplished by maintenance personnel; however, other personnel may be qualified and authorized to perform certain functions. Procedures requiring specialized knowledge or skill, or requiring the use of tools or test equipment must be accomplished by maintenance personnel. The satisfactory accomplishment of all maintenance procedures, regardless of who performs them, is the responsibility of the operator. Appropriate procedures are required to be published as part of the operator's manual or MEL.
- 32. "Message Oriented" relief refers to the MMEL dispatch provisos as provided for in Section 2 of this MMEL. Typically, this type of MMEL relief will not require fault isolation by maintenance personnel, allowing flight crew direct association of dispatch provisos to messages posted on the Crew Alerting System (CAS).
- 33. "Non-combustible materials" for MMEL purposes is addressed by the following NOTE in those items where applicable "Note Unit Load Devices (ULDs) may be carried in the associated compartment provided that no cargo is carried on or in their devices. For ballast purposes, use of bags (made of fiberglass or Kevlar), or sand or ingots of non-magnetic metals (such as lead) is acceptable."
- 34. "Non-essential Equipment and Furnishings (NEF)" are those items installed on the aircraft as part of the original certification, supplemental type certificate, or engineering order that have no effect on the safe operation of flight and would not be required by the applicable certification rules or operational rules. They are those items that if inoperative, damaged, or missing have no effect on the aircraft's ability to be operated safely under all operational conditions. These non-essential items may be installed in areas including, but not limited to, the passenger compartment, flight deck area, service areas, cargo areas, crew rest areas, lavatories, and galley areas. NEF items are not items already identified in the MEL or CDL of the applicable aircraft.
- 35. "Notes" Column 4 provides additional information for the crew member or maintenance consideration. Notes are used to identify applicable material which is intended to assist with compliance, but do not relieve the operator of the responsibility for compliance with all applicable requirements. Notes are not a part of the provisos.

Issue 011, Oct 21/2019

Transport Canada

- 36. "(O)" symbol indicates a requirement for a specific operations procedure which must be accomplished in planning for and/or operating with the listed item inoperative. Normally these procedures are accomplished by a crew member; however, other personnel may be qualified and authorized to perform certain functions. Although some of the CB/SSPC deactivation tasks are identified as (O) within this MMEL the operator might include them as (M) tasks within their MEL. The satisfactory accomplishment of all procedures, regardless of who performs them, is the responsibility of the operator. The recommend (O) procedure(s) presented in the DDG may not address airline-specific operating requirements. Incorporation of these procedures into the operator's MEL must take applicable operating requirements into consideration. The satisfactory accomplishment of all procedures, regardless of who performs them of all procedures, regardless of who performs the operator's MEL must take applicable operating requirements into consideration. The satisfactory accomplishment of all procedures, regardless of who performs them, is the responsibility of the operator of the required specific operations procedures in the log book will be accomplished by adding a statement to the "Instructions for Journey Log Book Use" found in the Operator's Journey Log Book to cover those items requiring Operational Procedures.
 - <u>NOTE</u>: The (M) and (O) symbols are required in the operator's MEL unless otherwise authorized by Transport Canada.
- 37. "Observer's Seat" refers to a seat in the flight deck of an airplane, of which there are usually one or two. The primary observer's seat is used for official purposes such as Transport Canada check rides, company training, etc.
- 38. "Official Capacity" for the purpose of this document with respect to the occupant of the observer's seat includes flight training, Transport Canada Civil Aviation Safety Inspector/company check rides, a crew member, or a person authorized by the air operator in accordance with procedures specified in the air operator's company operating manual.
- 39. "Operative" for the purpose of this document means that a system or component will accomplish its intended function. When an MMEL item specifies that an item of equipment must be operative it does not necessarily mean that its operational status must be verified; it is to be considered operative unless reported or is known to be malfunctioning.
- 40. "Passenger" means a person, other than a crew member, who is carried on board an aircraft.
- 41. "Passenger Convenience Items" means those items related to passenger convenience, comfort, or entertainment such as, but not limited to, galley equipment, movie equipment, ash trays, stereo equipment, overhead reading lamps, etc.
- 42. "Placarding" means each inoperative item must be placarded to inform and remind the crew members and maintenance personnel of the equipment condition.
 - <u>NOTE</u>: To the extent practical, placards should be located adjacent to the control or indicator for the item affected; however, unless otherwise specified, placard wording and location will be determined by the operator.
- 43. "Protective Breathing Equipment (PBE)" (CARs) means equipment designed to cover the eyes, nose, and mouth of the wearer, or the nose and mouth where accessory equipment is provided to protect the eyes, and to protect the wearer from the effects of smoke, carbon dioxide or other harmful gases.
- 44. "Reduced Vertical Separation Minimum (RVSM) Airspace" means any airspace or route where aircraft are separated by 1000 feet vertically between FL 290 and FL 410. RVSM Operations means operations conducted in RVSM airspace.

Issue 011, Oct 21/2019

- 45. "Repair Intervals" All users of an MEL must do repairs of inoperative systems or components, deferred in accordance with the MEL, at or prior to the repair times established by the following letter designators:
 - "Category A" Items in this category shall be repaired within the time interval specified in the "Remarks or Exceptions" column of the operator's approved MEL. Whenever the proviso in the "Remarks or Exceptions" column of the MMEL states cycles or flight time, the time interval begins with the next flight. Whenever the time interval is listed as flight days, the time interval begins on the flight day following the day of discovery.
 - "Category B" Items in this category shall be repaired within three (3) consecutive calendar days, excluding the day of discovery. For example, if it were discovered at 10 a.m on January 26th, the three day interval would begin at midnight the 26th and end at midnight the 29th.
 - "Category C" Items in this category shall be repaired within ten (10) consecutive calendar days, excluding the day of discovery. For example, if it were discovered at 10 a.m. on January 26th, the ten day interval would begin at midnight the 26th and end at midnight February 5th.
 - "Category D" Items in this category shall be repaired within one hundred and twenty (120) consecutive calendar days, excluding the day of discovery.
- 46. "Runways near water" are runways where an over-run, under-run, or lateral runway excursion could end with the aeroplane in water deep enough that it would float. If a runway has such water within an area bounded by 1 Nm from the runway threshold, to 1 Nm beyond the departure end of the runway, and within 1000' laterally of the runway centerline, then it is considered near water.
- 47. "Safety Belt" (CARs) means a personal restraint system consisting of either a lap strap or a lap strap combined with a shoulder harness.
- 48. "Secured" means that the specified component must be put into an acceptable condition for safe flight. If required, an acceptable method of securing will be specified in the MEL.
- 49. "Shoulder Harness" (CARs) means any device that is used to restrain the upper torso of a person and that consists of a single diagonal upper torso strap or dual upper torso straps.
- 50. "System" means the group of directly related components which together perform a specified function; for example, the N2 Tachometer System would include the N2 indicator, tachometer generator and associated circuitry.
- 51. "System & Sequence Numbers" are based on Air Transport Association (ATA) Specification No. 100 and items are numbered sequentially.
- 52. "Time Limited Dispatch (TLD)" relief that is subject to time limited dispatch expressed as a specific number of engine hours or cycles, and will start in accordance with the times established by the engine manufacturer or as indicated in the remarks column of the MMEL. Time limited relief cannot be extended.
- 53. "Verified" means that a visual inspection or test is required to confirm unit or system operation or condition, as applicable.
- 54. "Visible Moisture" means an atmospheric environment containing water in any form that can be seen in natural or artificial light; for example, clouds, fog, rain, sleet, hail, or snow.

Aircraft A220–100 / A220–300

- 55. "Visual Flight Rules (VFR)" is as defined in the CARs. This precludes a pilot from filing an Instrument Flight Rules (IFR) flight plan.
- 56. "Visual Meteorological Conditions (VMC)" means the atmospheric environment is such that would allow a flight to proceed under the Visual Flight Rules applicable to the flight. This does not preclude operating under Instrument Flight Rules.

Transport Canada

Master Minimum Equipment List

1. All equipment installed on an aircraft in compliance with the Airworthiness Standards and Operating Rules must be operative. However, Canadian Aviation Regulations (605.07 and 705.07) permit the publication of a Minimum Equipment List (MEL) where compliance with certain equipment requirements is not necessary in the interests of safety under all operating conditions. Experience has shown that with the various levels of redundancy designed into aircraft, operation of every system or installed component may not be necessary when the remaining operative component can provide the required level of safety.

A Master Minimum Equipment List (MMEL) is developed by Transport Canada, with participation by the aviation industry, to improve aircraft utilization and thereby provide more convenient and economical air transportation for the public. The approved MMEL includes those items of equipment related to airworthiness and operating regulations and other items of equipment Transport Canada finds may be inoperative and yet maintain the required level of safety by appropriate conditions and limitations; it does not contain obviously required items such as wings, flaps, and rudders.

The MMEL is the basis for development of individual operator MELs which take into consideration the operator's particular aircraft equipment configuration and operational conditions. Operator MELs, for administrative control, may include items not contained in the MMEL; however, relief for administrative control items must be approved. An operator's MEL may differ in format from the MMEL, but cannot be less restrictive than the MMEL. The individual operator's MEL, when approved and authorized, permits operation of the aircraft with inoperative equipment.

Equipment not required by the operation being conducted and equipment in excess of the requirements are included in the MEL with appropriate conditions and limitations. The MEL must not deviate from the Aircraft Flight Manual Limitations, Emergency Procedures or with Airworthiness Directives. It is important to remember that all equipment related to the airworthiness and the operating regulations of the aircraft not listed on the MMEL must be operative.

Suitable conditions and limitations in the form of placards, maintenance procedures, crew operating procedures and other restrictions as necessary are specified in the MEL to ensure that the required level of safety is maintained.

The MEL is intended to permit operation with inoperative items of equipment for a period of time until repairs can be accomplished. It is important that repairs be accomplished at the earliest opportunity. In order to maintain the required level of safety and reliability, the MMEL establishes limitations on the duration of and conditions for operation with inoperative equipment.

The MEL provides for release of the aircraft for flight with inoperative equipment. When an item of equipment is discovered to be inoperative, it is reported by making an entry in the Aircraft Maintenance Record/Logbook. The item is then either repaired or may be deferred per the MEL or other approved means acceptable to Transport Canada prior to further operation. MEL conditions and limitations do not relieve the operator from determining that the aircraft is in condition for safe operation with items of equipment inoperative.

Operators are responsible for exercising the necessary operational control to ensure that the required level of safety is maintained. When operating with multiple inoperative items, the interrelationships between those items and the effect on aircraft operation and crew workload must be considered.

Operators are to establish a controlled and sound repair program including the parts, personnel, facilities, procedures, and schedules to ensure timely repair.

WHEN USING THE MEL, COMPLIANCE WITH THE STATED INTENT OF THE PREAMBLE, DEFINITIONS, AND THE CONDITIONS AND LIMITATIONS SPECIFIED IN THE MEL IS REQUIRED.

Master Minimum Equipment List

Page 1

A new section has been authorized as an alternative to the standard method of MMEL dispatch relief, as is normally achieved through fault isolation procedures, and subsequent reference to the dispatch LRU/Component MMEL relief. Standard references to MMEL dispatch relief are in Section 1. Following the standard MMEL herein, Section 2 has been developed with the objective of minimizing the requirement for maintenance personnel to be available, largely allowing flight crews to dispatch from the displayed CAS (Crew Alerting System) message, without specifically identifying failed LRUs or components.

As Section 2 is intended as an alternative dispatch relief methodology, the LRU/Component (Section 1) relief will be retained in order to provide maximum flexibility for relief. Flight crews/operators may dispatch failures with reference to either Section 1 or Section 2 of this MMEL to the advantage that either may provide.

It will be recognized in many cases that when comparing dispatch relief provisos for posted CAS messages in Section 2 to those of the related LRU/Component dispatch relief in Section 1, the provisos associated with dispatching the CAS message will generally be more restrictive in content and relief interval. Without the opportunity for fault isolation through maintenance, it must be assumed that worst-case failure conditions always underlie the posted message – commensurately, dispatch must be more restrictive. However, where maintenance personnel are available and fault isolation conducted, relief provisos in Section 1 may be found to provide fewer or less stringent restrictions upon operations and offer a longer relief interval.

SECTION 1

LRU / COMPONENT ORIENTED MMEL RELIEF

24–16	Extraction Fans (EFAN)	С	2	1	(M)	Except for extended operations, may be inoperative provided inoperative Avionics Exhaust Valve (AEV) is secured OPEN.		
24–18	Avionics Bay Exhaust Valves (AEV)	С	2	0	(M)	One or both may be inoperative provided affected AEV is secured OPEN.		
24–24	Ground Valve, MID Avionics Bay	С	1	0	(M)	May be inoperative provided affected valve is secured CLOSED.		
26–15	Forward/Middle Bay Inlet Fan	С	2	0	(O)	May be inoperative provided INLET is selected OFF before each flight.		
30–04	Cabin Altitude Limitation Feature							
1)	Primary and Backup Altitude Limiter	С	2	0	(O)	 One or both may be inoperative provided: (a) Both Auto Pressurization Modes are operative, and (b) Flight is conducted at or below FL250. 		
31–01	Cabin Pressure Control System (CPCS)	С	1	0	(M)(O)	 Except for extended operations, may be inoperative provided: (a) Aircraft crews are the only occupants of the aircraft, (b) Outflow Valve (OFV) is secured OPEN, (c) Flight is conducted in an unpressurized configuration at or below 10000 ft MSL, (d) Extended overwater operations are not conducted, (e) Takeoffs and landings are not conducted on runways near water, and (f) Both EFANs are operative. 		
31–28	Outflow Valve Travel Limiter	С	1	0	(M)	 May be inoperative provided: (a) The Outflow Valve Travel Limiter is verified inoperative in retracted position, and (Cont'd)

CAS MESSAGE ORIENTED MMEL RELIEF

Master Minimum Equipment List

BD500-3AB48-12703-00

Transport Canada

Page 1 Issue 011, Oct 21/2019

Print Date: 2019-12-04

Issue 011, Oct 21/2019

Transport Canada

Master Minimum Equipment List

Print Date: 2019-12-04

1. The following new section has been authorized in accordance with the provisions of TCCA MMEL GB Item 00–00–0, Rev 1, or later, regarding dispatching directly from displayed CAS (Crew Alerting System) messages. "CAS message" relief is an alternative to the standard method of MMEL dispatch relief, as is normally achieved through fault isolation procedures, and the subsequent dispatch under the traditional LRU oriented MMEL relief. This Section 2 has been developed with the objective of allowing flight crews to dispatch from the displayed CAS message, without specifically identifying associated failed LRUs or components.

As Section 2 is intended as an alternative dispatch relief methodology, the LRU-oriented relief (Section 1) will be retained in order to provide maximum flexibility for dispatch relief. Flight crews/operators may dispatch failures with reference to either Section 1 or Section 2 of this MMEL to the advantage that either associated relief may provide. Upon comparison, it will be recognized in some cases that dispatch relief provisos for posted CAS messages to those of the related LRU dispatch relief, the provisos associated with the CAS message can appear more restrictive in content and/or relief interval. Without the opportunity for fault isolation through maintenance, it must be assumed that worst-case failure conditions always underlie the posted message – commensurately, dispatch should be more restrictive.

However, where maintenance personnel are available and fault isolation conducted, relief provisos in Section 1 may be found to provide fewer or less stringent restrictions upon operations and offer a longer relief interval.

Section 2 has been arranged in alphabetical order of the indicated CAS message, by ATA Chapter. However, to avoid any possible miss-identification, each message is identified beneath as to its alert level.

Repair intervals (A, B, C & D) associated with CAS message reliefs herein, remain consistent with those of Section 1, and as described in the Definitions section in the front matter of this MMEL.

In conjunction with Section 2, a new separate dispatch procedures section has also been developed, also arranged in alphabetical order of the indicated CAS message. Where deemed necessary, the familiar "O" indicates the need for such supporting tasks, the scope of which shall be at the discretion of the approval authority. Acceptable tasks include, but are not necessarily limited to the following duties:

- 1. Procedures described which exercise cockpit (or cabin) system controls utilized in normal flight operations;
- 2. Deactivation of affected systems, as achieved by pulling system breaker or use of remote electronic system isolation;
- 3. Visual inspection behind panels (internal or external) which are accessible without tools via quick-release latches and which clearly indicate their unlocked or unsafe state; (red/green safe window; flush fit latches).
- 4. Visual confirmation of remote gauge indications, or valve positions as provided by integral external indicators.

FLT CTRL FAULT (ADVISORY)		
27 FLT CTRL FAULT – SPOILER LEVER SNSR REDUND LOSS		

Master Minimum Equipment List

Issue 011, Oct 21/2019

CAS Message Indication	1.	. 2. Remarks and Exceptions
27–00–092–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – SPOILER REU CCDL REDUND LOSS	A	 May be displayed provided: (a) Aircraft is not powered down, (b) Electronic FCS Test (PBIT) is not performed, and (c) May be inoperative for one calendar day.
27–00–110–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – L SIDESTICK SHAKER INOP	В	 May be displayed provided: (a) The following message 27 FLT CTRL FAULT – R SIDESTICK SHAKER INOP is not displayed, and (b) Pilot flying has operative sidestick shaker.
27–00–110–03 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – R SIDESTICK SHAKER INOP	В	 May be displayed provided: (a) The following message 27 FLT CTRL FAULT – L SIDESTICK SHAKER INOP is not displayed, and (b) Pilot flying has operative sidestick shaker.
27–00–114–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – L AUTOPILOT SIDESTICK DETENT INOP	С	(O) May be displayed provided Autoland Operations are not conducted.
27–00–114–03 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – R AUTOPILOT SIDESTICK DETENT INOP	С	(O) May be displayed provided Autoland Operations are not conducted.
27–00–115–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – L SIDESTICK SNSR REDUND LOSS	С	May be displayed.

CAS Message Indication	1.	2. Remarks and Exceptions
27–00–115–03 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – R SIDESTICK SNSR REDUND LOSS	С	May be displayed.
27-00-131-01	С	May be displayed.
FLT CTRL FAULT (ADVISORY)	U	inay be displayed.
27 FLT CTRL FAULT – RUDDER PEDAL SNSR REDUND LOSS		
27–00–134–01 FLT CTRL FAULT (ADVISORY)	С	May be displayed.
27 FLT CTRL FAULT – AILERON TRIM SW REDUND LOSS		
27–00–135–01 FLT CTRL FAULT (ADVISORY)	С	May be displayed provided: (a) The following message 27 FLT CTRL FAULT – R PITCH TRIM SW DEGRADED is not displayed.
27 FLT CTRL FAULT – L PITCH TRIM SW DEGRADED		
27–00–135–03 FLT CTRL FAULT (ADVISORY)	С	May be displayed provided: (a) The following message 27 FLT CTRL FAULT – L PITCH TRIM SW DEGRADED is not displayed.
27 FLT CTRL FAULT – R PITCH TRIM SW DEGRADED		
27–00–136–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – L TOGA SW INOP	В	 (O) May be displayed provided: (a) 27 FLT CTRL FAULT – R TOGA SW INOP is not displayed. (b) Alternate procedures are established and used, and (c) Operations with Steep Approach are not conducted.

CAS Message Indication	1.	2. Rer	marks and Exceptions
27–00–137–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – L TOGA SW INOP	С	(O)	 May be displayed provided: (a) 27 FLT CTRL FAULT – R TOGA SW INOP is not displayed, (b) Alternate procedures are established and used, (c) Autopilot and Flight Director are not used below: 2,000 feet AGL on ILS approaches; or 500 feet AGL or MDA whichever is higher on all other approaches, and (d) Operations with Steep Approach are not conducted.
27–00–138–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – R TOGA SW INOP	В	(O)	 May be displayed provided: (a) 27 FLT CTRL FAULT – L TOGA SW INOP is not displayed, (b) Alternate procedures are established and used, and (c) Operations with Steep Approach are not conducted.
27–00–139–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – R TOGA SW INOP	С	(O)	 May be displayed provided: (a) 27 FLT CTRL FAULT - L TOGA SW INOP is not displayed, (b) Alternate procedures are established and used, (c) Autopilot and Flight Director are not used below: 2,000 feet AGL on ILS approaches; or 500 feet AGL or MDA whichever is higher on all other approaches, and (d) Operations with Steep Approach are not conducted.
27–00–151–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – AFCU DMC INPUT REDUND LOSS	С		May be displayed.
27–00–152–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – DMC AFCU INPUT REDUND LOSS	С		May be displayed.

CAS Message Indication	1.	2. Remarks and Exceptions
27–00–153–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – PFCC INPUT REDUND LOSS	С	May be displayed.
27–00–154–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – PFCC IRS INPUT REDUND LOSS	С	 (O) May be displayed provided: (a) None of the following messages are displayed: 27 FLT CTRL FAULT – ISI INPUT INOP 27 FLT CTRL FAULT – AHRS INPUT INOP IRS 1 FAIL (advisory) IRS 2 FAIL (advisory) IRS 3 FAIL (advisory) (b) Autoland Operations are not conducted, and (c) Steep Approach is not conducted.
27–00–155–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – PFCC RAD ALT INPUT REDUND LOSS (Three RAD ALT installation) ***	С	 (O) May be displayed provided: (a) None of the following messages are displayed: 27 FLT CTRL FAULT – RAD ALT INPUT DEGRADED RAD ALT 1 FAIL (advisory) RAD ALT 2 FAIL (advisory) RAD ALT 3 FAIL (advisory), and (b) LAND 3 Operations (CAT III – fail operational) are not conducted.
27–00–157–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – PFCC FADEC INPUT REDUND LOSS	С	 (O) May be displayed provided none of the following messages are displayed: AUTO BRAKE FAIL (caution) NORMAL BRAKE FAIL (caution) 32 BRAKE FAULT – BDCU 1 NORM INOP 32 BRAKE FAULT – BDCU 2 NORM INOP
27–00–159–01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – AFCU SFECU INPUT REDUND LOSS	С	May be displayed.

Master Minimum Equipment List

Issue 011, Oct 21/2019

BD500-3AB48-12703-00

С	(O)	May be displayed provided Slat/Flap Alternate Switch is
		verified operative before the first flight of each flight day.
С		May be displayed.
		Item deleted at Issue 003.
С		May be displayed.
С		May be displayed.
В	(O)	May be displayed provided Operations with Steep Approach are not conducted.
В	(O)	May be displayed provided:
		 (a) None of the following messages are displayed: 27 FLAP SLOW – CHAN 2 INOP
		27 SLAT SLOW – CHAN 1 INOP 27 SLAT SLOW – CHAN 2 INOP (Cont'd)
	C B	С (О)

CAS Message Indication	1.	2. Remarks	s and Exceptions
27–00–213–01 FLAP SLOW (ADVISORY) 27 FLAP SLOW – CHAN 1 INOP (A/C without SB BD500–314002 or Production Modsum RC500T101030) (Cont'd)		(b) (c) (d) <u>NOT</u>	Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), SFECU Flap Channel 1 is deactivated, and Operations with Steep Approach are not conducted. E: Flap will operate at half speed.
27–00–213–02 FLAP SLOW (ADVISORY) 27 FLAP SLOW – CHAN 1 INOP (A/C with SB BD500–314002 or Production Modsum RC500T101030)	В	(O) May (a) (b) (c) (d) <u>NOT</u>	be displayed provided: None of the following messages are displayed: 27 FLAP SLOW – CHAN 2 INOP 27 SLAT SLOW – CHAN 1 INOP 27 SLAT SLOW – CHAN 2 INOP Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), SFECU Flap Channel 1 is deactivated, and Operations with Steep Approach are not conducted. <u>E</u> : Flap will operate at half speed.
27–00–213–03 FLAP SLOW (ADVISORY) 27 FLAP SLOW – CHAN 2 INOP (A/C without SB BD500–314002 or Production Modsum RC500T101030)	В	(O) May (a) (b) (c) (d) <u>NOT</u>	 be displayed provided: None of the following messages are displayed: 27 FLAP SLOW – CHAN 1 INOP 27 SLAT SLOW – CHAN 2 INOP Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), SFECU Flap Channel 2 is deactivated, and Operations with Steep Approach are not conducted. E: Flap will operate at half speed.

Issue 011, Oct 21/2019

CAS Message Indication	1.	2. Rem	arks and Exceptions
27–00–213–04 FLAP SLOW (ADVISORY) 27 FLAP SLOW – CHAN 2 INOP (A/C with SB BD500–314002 or Production Modsum RC500T101030)	В		 May be displayed provided: (a) None of the following messages are displayed: 27 FLAP SLOW – CHAN 1 INOP 27 SLAT SLOW – CHAN 1 INOP 27 SLAT SLOW – CHAN 2 INOP (b) Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), (c) SFECU Flap Channel 2 is deactivated, and (d) Operations with Steep Approach are not conducted.
27–00–215–01 SLAT FAULT (ADVISORY) 27 SLAT FAULT – DATA CONFIG INPUT REDUND LOSS	С	I	May be displayed.
27–00–217–01 SLAT FAULT (ADVISORY) 27 SLAT FAULT – OUTBD BRAKE PROX SNSR INOP	С	I	May be displayed.
27–00–219–01 SLAT FAULT (ADVISORY) 27 SLAT FAULT – PDU FAULT	С	I	May be displayed.
27–00–221–01 SLAT SLOW (ADVISORY) 27 SLAT FAULT – SKEW SNSR REDUND LOSS	В		May be displayed provided Operations with Steep Approach are not conducted.

CAS Message Indication	1.	2. Rei	marks and Exceptions
27–00–223–01 SLAT SLOW (ADVISORY) 27 SLAT SLOW – CHAN 1 INOP (A/C without SB BD500–314002 or Production Modsum RC500T101030)	В	(O)	 May be displayed provided: (a) None of the following messages are displayed: 27 SLAT SLOW – CHAN 2 INOP 27 FLAP SLOW – CHAN 1 INOP 27 FLAP SLOW – CHAN 1 INOP (b) Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), (c) SFECU Slat Channel 1 is deactivated, and (d) Operations with Steep Approach are not conducted.
27–00–223–02 SLAT SLOW (ADVISORY) 27 SLAT SLOW – CHAN 1 INOP (A/C with SB BD500–314002 or Production Modsum RC500T101030)	В	(O)	 May be displayed provided: (a) None of the following messages are displayed: 27 SLAT SLOW – CHAN 2 INOP 27 FLAP SLOW – CHAN 1 INOP 27 FLAP SLOW – CHAN 2 INOP (b) Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), (c) SFECU Slat Channel 1 is deactivated, and (d) Operations with Steep Approach are not conducted. NOTE: Slat will operate at half speed.
27–00–223–03 SLAT SLOW (ADVISORY) 27 SLAT SLOW – CHAN 2 INOP (A/C without SB BD500–314002 or Production Modsum RC500T101030)	В	(O)	 May be displayed provided: (a) None of the following messages are displayed: 27 SLAT SLOW – CHAN 1 INOP 27 FLAP SLOW – CHAN 1 INOP 27 FLAP SLOW – CHAN 2 INOP, (b) Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), (c) SFECU Slat Channel 2 is deactivated, and (d) Operations with Steep Approach are not conducted. NOTE: Slat will operate at half speed.

Master Minimum Equipment List
